Development Technical Lead/Project Manager

Surrey
C£55,000 plus benefits

Our Client is a global leader in measurement and information. They believe that providing their clients a precise understanding of the consumer is the key to making the right decisions – decisions that can lead to profitable growth. They're always innovating to keep pace with emerging market trends and the increasingly diverse, demanding and connected consumer. After nearly a century, they are more focused and skilled than ever at providing the complete view of what consumers watch and buy through powerful insights that clarify the relationship between content and commerce. Whether their clients are in media, consumer packaged goods, telecom or advertising, their expansive data and measurement capabilities provide market context and confidence through our long history of innovation and integrity.

You will be responsible for overall coordination, status reporting and stability of project oriented work efforts by a team of developers, performing analysis, development, testing, and support for highly complex application software. The role will involve: translation of business to systems requirements; ensuring that applications are developed using current standard methodologies and best practice; assembling project plans and teamwork assignments; tracking key project milestones and project plans and facilitating the production of specifications

You will be responsible for: developing solutions that are end-to-end; translating business requirements to technical solutions; coordinating with business stakeholders for commitment and fulfilment of work requests and coordinating across all technical aspects of solution development.

Ideally with a BS in Computer Science or related study in addition to technical background you will have experience in designing and developing in: Java/J2EE, EJB including CMP, JSP and SQL. Supervisory or team leader experience will be important including: Agile development methods and solid knowledge of SDLC methodologies including awareness and experience of applying the processes for producing quality software, development of scalable service oriented applications, Web application development, Unit, System and Performance, extensive knowledge and expertise in the use of project management methodologies and tools and resource and management. Proven experience in managing/leading offshore, remote and third party cross-functional teams will be essential.
