

Senior Software Developer

Based in Woking

Our Client is a global leader in measurement and information. They believe that providing their clients a precise understanding of the consumer is the key to making the right decisions – decisions that can lead to profitable growth. They're always innovating to keep pace with emerging market trends and the increasingly diverse, demanding and connected consumer. Whether their clients are in media, consumer packaged goods, telecom or advertising, their expansive data and measurement capabilities provide market context and confidence through their long history of innovation and integrity

Role Description:

Responsible for guiding a team of developers, including self in analyzing, developing, testing, and supporting highly complex application software. Must ensure that applications are developed using standard methodologies and best practices.

Design, Development and Support of:

- Server and/or client solutions for customer facing web applications in a portal environment
- integration with external databases and interfacing systems
- user interfaces for system administration and configuration for server side applications elements
- Produce and deliver high quality artifacts and deliverables that include but are not limited to system specifications, process diagrams, and system flow charts.
- Translation of business requirements to systems requirements. Business requirements must be analyzed and deconstructed into a series of smaller requirements for different components.
- Manage production of specifications and agree with/manage customers for scope
- Ensure change control process is maintained for development and participate in same for live systems
- Collaborate with PM to develop an iterative delivery plan for the system and scope management
- System-level support of a global infrastructure, hardware and software tools, including guiding and executing best practices in the areas of installation, configuration, maintenance, and support.
- Identify and investigate alternatives for optimizing resources and determine feasibility of a solution
- Obtain intelligent estimates of the cost of operating and maintaining a proposed new or changed system, assuming use of appropriate technology, tools, and methods.
- Maintain statistics of systems utilization and likely upgrade needs either for software enhancement, hardware replacement or additions

Overall Responsibilities:

- Develop solutions that are end-to-end and decomposing the end-to-end solution into workable modules
- Translate business requirements to technical solutions
- Coordinate across all technical aspects of solution development including coding, infrastructure, testing, and deployment
- Participate in Support activities as needed and provide appropriate support documentation
- Mentor off shore team members in appropriate design methodologies and technologies
- Participate in design reviews
- Provide input to training and testing teams
